---	--	--	--

Type contaminant(s):

<input checked="" type="checkbox"/> ORGANICS	<input checked="" type="checkbox"/> INORGANICS	<input checked="" type="checkbox"/> RADIONUCLIDES	<input type="checkbox"/> MICROBIOLOGICAL
--	--	---	--

Summary:

Sediment and water samples from the Arkansas River were collected upstream and downstream of the site. The results do not indicate that the contaminants have migrated from the site.

Analyses for inorganics, organics and radiochemical were conducted except that the rad data for the upstream water and downstream sediment samples were missing (or were not conducted.)

In consideration of the contamination detected onsite, i.e., contamination was detected in several wells, concur with the FIT recommendation to conduct further sampling.

RECOMMENDATION: conduct follow-up sampling to confirm extent of migration (on surface and in the ground water.)

Concurrence:
